U-Coater

Coating with Thermal Transfer

Every part of the paper is coated by a very thin (2-3microns) gloss film to its surface. This gives any job a wonderful high gloss look.

Coating with Melting Toner

This unique method makes it possible to achieve a coating with melting toner. Using a high parallelism film the machine applies heat on to the surface of the paper. Toner is then applied to the surface, melted and burnished.

Gold and Silver Embossing

The U-Coater can also produce gold and silver embossing.

Additional features

- No trimming after coating is required.
- The coating has no odour (as in the U.V process).
- No chemicals or messy cleaning.
- Paper coated by the U-Coater can easily be folded (unlike laminated stock).
- The U-Coater has a very small footprint for an SRA3+ machine.
- Eco Friendly - uses only 600W (approx).
- The film coating is waterproof (unlike U.V.).
- Low machine cost compared to U.V type coaters.

Max paper Size	320(W) x 600(L)mm
Min. Paper Size	
Max Paper Weight	90g/m2 - 350g/m2
Paper Feed	Handfeed
Processing Speed	12 sheets/min. (A4)
Paper Quality	All Qualities
Coating Thickness	2 microns (approx)
Coating Technology	Dry Coat, Partial Mirror, 140mm/Roll
Coating Material	200m/Roll (Dry Coat Mirror Cast)
	140m/Roll (Foil)
Finishing	Gloss Coat/Spot Coat/Foil Stamp
Operation	Touch Screen
Dust Free Prints	Option Dust Removal device
Cleaning	Not necessary
Warmup Time	9 Minutes (approx)
Consumables	Dry Coat Film, Partial Mirror Cast Film
	Foils, Film Core etc.
Consumed Power	600w (100V/50Hz)
Dimensions	875(L) x 517(D) x 313(H)mm
Weight	28kg

Specification may be subject to change before launch.
